

2012 Doomsday Myth: Busted!

Ladies and Gentlemen,

It is so easy to spread negative thoughts around. It seems (but it is not) so hard to spread positive thoughts around. Yet I feel inclined to oppose some of the negative thoughts, at the expense of positive thoughts, and for this I do apologize.

Do you really believe the doomsdayers? Do you really think that December 2012 will be the last time that Earth exists? Well, here some doomsday theories. And busted!

Doomsday hoax number 1:

“Poles will shift, the Earth’s magnetic field will disappear, and the Earth will tilt and even rotate the other way around.”

Magnetic fields polarity are subject to regional shifting all the time! It got published over and over on National Geographic and Discovery Channel, so anyone is supposed to know that. But not the way the uneducated doomsdayers (who never studied basic geo science) imagine. Even if magnetic poles will shift, the total amount of magnetic fields will remain exactly the same. So mankind will stay properly protected from cosmic radiation, your weight will remain the same as gravity is induced my mass and will stay the same, you won’t walk upside down, and natural disasters will not intensify. And whether the magnetic polarity is plus or minus at a given point, the only thing that reverses is the needle of the magnetic compass.

The Earth’s rotation cannot be stopped and reversed simply because merely magnetic fields do not have enough force to do so. Besides, shift in rotation can only happen from an external force, simply because there must be a torque point, which is not available at only internal location. Magnetic field and gravity are not the same! Elementary physics, Dr. Watson! As I said, magnetic shifting is a continuous activity, and in 2012 it will be no different than in 1813 or any other year. In other words:

Planet rotation shift doomsday myth: busted!

Doomsday hoax number 2:

“The world will end on 12/21/2012 because the Mayan Calendar ends there.”

No-one talks about where the Maya Calendar *STARTS* ! ...

The Mayans were quite advanced when it came to science and astronomy/astrology (at that time, astrology and astronomy were the same!). They predicted an astrological galactic alignment on December 12, 2012. Please note that starry constellations are completely mocked-up by man. The actual stars in an astrological constellation may not even be tens or hundreds of lightyears near the others. Astrologers have simply taken stars with the brightest appearance and then started getting carried away with imagination. Rumors that say that the Sun or Earth will enter the center of the galaxy are the sheerest nonsense ever heard. The Sol system happens to be at the rim of our galaxy and it might take another couple of quadratrillion years before it get sucked in a black hole.

Besides, in the Maya calendar – by the way, did the doomsdayers study the Maya calendar? Well, I don’t think so! – there is no prediction at all at or near the end of their calendar. Perhaps they simply ran out of rock or tools or the workers went on strike. “My wallcalendar stops at Dec 31, 2010, so therefore on Jan 1, 2011 I will be dead.” This is exactly the same kind of reasoning by the doomsdayers.

Like any other calendar: none of the calendars ever produced contain the dates of the beginning or the

end of the world. The lesser known calendar of the Pyramid of Gizeh shows various “endings”, such as at 1951 and at 2001. On none of these dates the world stopped existing the way it existed, except that after 9-11 2001 the world changed in a political sense.

Many “predictions” about the end of the world have been proven completely wrong. Remember the year 2000? It was predicted to be the end of the world as well. Only some outdated computers failed to work properly after 1-1-2000.

On december 21 2012 it will be Winter. That is the only prediction to come true. For the Mayans it means the end of the Summer. That’s all.

Maya doomsday myth: busted!

Doomsday hoax number 3:

“WTC 911 was predicted by Nostradamus”

Many people think that Nodstradamus predicted the end of the world in 2012, 9/11, and the French Revolution etcetera. Well, he wrote nothing more than hippie poetry. He was also used to help support the Y2K doomsday theory that appeared to be a total scam. Nodstradamus never predicted any of these. Doomsdayers never read any of Nostradamus original works, I’m so sure, because that’s where a totally different series of predictions emerge. All of his alledged predictions were very vague and twisted by countless doomsdayers to mean something different. For instance, here is the original prediction:

“The year 1999, seventh month,
From the sky will come a great King of Terror
To bring back to life the great King of the Mongols,
Before and after Mars to reign by good luck”

And here is the faked doomsdayed altered prediction:

“In the year of the new century and nine months,
From the sky will come a great King of Terror...
The Sky will burn at forty-five degrees
Fire approaches the great new city...
In the city of york there will be a great collapse,
2 twin brothers torn apart by chaos while the fortress falls
great leader will succumb”

Good to know that this text appeared only after the 911 event, not before. Nostradamus predictions are nothing but hoax and scam. He never predicted anything accurately, if at all he predicted anything. He only wrote some poems about the time he lived in. Nothing more.

Of course there is nowhere near anything about the end of the world in December 2012 in any of Nostradamus original writings that got read in the museum. Why don’t the doomsdayers check on the originals?

Nostradamus doomsday myth: busted!

Doomsday hoax number 4:

“Planet X Nibiru will destroy planet Earth”

This is undoubtful the most popular 2012 doomsday theory. It states that, in 2012, the legendary full sized Planet X (aka Nibiru) will crash into the Earth and kill everyone. Or, at least fly-by very closely so that the Earth gets damaged severely. Or, that an advanced alien race will use this close fly-by to

travel to Earth and teach us something. This was started and spread generally by Zecharia Sitchin, an ego-tripper who had no previous classes or studies in Sumerian culture (whom he claims predicted Planet X's return) and who never seriously studied astronomy or astrophysics. Unfortunately, he found many naive doomsday followers.

For a planet to approach our Sol system it is 100% likely that such huge heavenly body should already have been discovered. If such planet is 2 years away from us, then we are not talking about lightyears of distance at present time, but a much shorter range. A planet cannot travel at even a quarter of the speed of light! We are able to discover exo planets lightyears away, so why not a planet with the range of our Solar system orbital plane? Does not make sense. And NASA Hubble telescope still has a very good eye.

The Sumerians are believed to have seen and predicted the supposed Nibiru to crash into the planet Earth in 2012. While they did believe that Earth was created after a fight between Tiamat and Nibiru, those were both gods or maybe UFOs, but not planets or stars. Sitchin created the myth that the Sumerians believed the gods to be planets. The Sumerians were not even practising astronomy. No record of such activity has ever been found. Sitchin never studied real science either.

Nibiru doomsday myth: busted!

Doomsday hoax number 5:

"Planet X will cause the original continents to drift apart."

Well, Earth tectonic plates are moving all the time, but of course not at 100 miles an hour. And even if a planet would come in the vicinity of planet Earth, or a Moon ... (yes, ours), tectonic plates would stay put, simply because of the laws of gravity. Mind you, is there any doomsdayer who studies geophysics and astrophysics? Earth has gravity too, mind you. They should know better!

Also, there is the theory that NASA spotted a planet-like celestial body and renamed it Eris. According to the majority of 2012 doomsdayers, Planet X is supposed to be 2/3 the size of our planet, NASA calculated Eris to be only a little bit larger than Pluto. So, not even half the size of Earth. Also, the closest Eris will ever come to Earth will be in 2255 with the distance of about 4 billion miles. And that will in no way distort gravitational or magnetic activity.

Planet-X doomsday myth: Busted!

Doomsday hoax number 6:

"The galactic ecliptic alignment would imply the end of planet Earth"

You know, there are many stars and planets that are aligned with some kind of plane in the galaxy. And guess what, none of these stellar objects got destroyed. So, whether a celestial body (star, planet, moon, etc) is aligned with others in some way, it has absolutely no other significance than emotional value.

At every moment anyone can dream up any alignment of any kind. Just look at the stars with a good telescope during a clear night, smoke a joint, listen to an astrology mp3, and lo and behold, you will see at least 7 alignments!

On the serious side, the closest approach was at the 18th hour of right ascension intersected with the galactic equator – intersected with the ecliptic – was the so-called Winter Solstice of 1:50 am on December 22, 1998. The sun was only 0.30 arc minutes (0.005 degrees) off of the galactic equator. And believe it or not, at that time not a speck of end-of-the-world doomsday occurred!

The pseudo scientists who talk about alignments know nothing about astronomy. Yet they claim to be the experts and fill their pockets with money given by the audience during their conferences.

There are many good websites that explain all about ecliptic alignment from a pure astronomical viewpoint, and I am not going to copy/paste their content here. I do agree with them that in no way any sort of alignment will cause any sort of global destruction.

And guess what? There is NO galactic alignment to come in the next millions of years and the Sun will not be in the center of the galaxy until tens or hundreds of millions of years from now. See, the galactic ecliptic plane is an imaginary disc that represents the “thin disc” of our galaxy. The galactic center is that bulge in the middle. Our solar system is hundreds or thousands of lightyears above/under (depends from where you look at it) “the surface” of that disc. And it is still unclear whether the ecliptic plane of our solar system will ever physically intersect with that of our galaxy.

Galactic alignment doomsday myth: Busted!

And then and now:

My friends, I am dead serious about all of the above. And my prediction for December 2012 is that life simply continues as it did before. You don't have to be a prophet to know that mankind will still exist also after a couple of thousand years. The Earth exists already for I don't know how many millions of years, and the Moon is even a lot older. And they still survived. Why don't you check the Plejaren messages? And why don't you study sciences rather than hippie doomsdayology?

The Doomsday industry is booming:

Oh yes, I forgot to mention that doomsday already occurs: Countless doomsdayers have setup the most convincing websites, selling books, DVDs, PDFs, videos, audios, CDroms and what have you, all about the date 21DEC2012 that you and the rest of us will die. And those folks ask you to pay them money! I have seen prices of hundreds of Dollars for a doomsday item! This is a scandal and a fraud. That makes me sick! Doomsday has become an industry and there are people making a living out of doomsdaying! Fuck doomsday!!!

2012 Internet Kill Plan

Secret Plan To Kill Internet By 2012 Leaked? Well, this seems not so much a scam but pretty real and worth mentioning. How about having to pay for each email to be sent or each webpage to be viewed? Now that is doom.

Some question if report that pay-per-view system to be introduced is a hoax, but wider march to regulate the web is documented.

ISP's have resolved to restrict the Internet to a TV-like subscription model where users will be forced to pay to visit selected corporate websites by 2012, while others will be blocked, according to a leaked report.

Despite some people dismissing the story as a hoax, the wider plan to kill the traditional Internet and replace it with a regulated and controlled Internet 2 is manifestly provable.

"Bell Canada and TELUS (formerly owned by Verizon) employees officially confirm that by 2012 ISP's all over the globe will reduce Internet access to a TV-like subscription model, only offering access to a small standard amount of commercial sites and require extra fees for every other site you visit. These 'other' sites would then lose all their exposure and eventually shut down, resulting in what could be seen as the end of the Internet," warns a report that has spread like wildfire across the web over the last few days.

The article states that Time Magazine writer "Dylan Pattyn" has confirmed the information and is about to release a story – and that the move to effectively shut down the web could come as soon as 2010.

People have raised questions about the report's accuracy because the claims are not backed by another source, only the "promise" that a Time Magazine report is set to confirm the rumor. Until such a report emerges many have reserved judgment or outright dismissed the story as a hoax.

What is documented, as the story underscores, is the fact that TELUS' wireless web package allows only restricted pay-per-view access to a selection of corporate and news websites. This is the model that the post-2012 Internet would be based on.

People have noted that the authors of the video seem to be more concerned about getting people to subscribe to their You Tube account than fighting for net neutrality by prominently featuring an attractive woman who isn't shy about showing her cleavage. The vast majority of the other You Tube videos hosted on the same account consist of bizarre avante-garde satire skits on behalf of the same people featured in the Internet freedom clip. This has prompted many to suspect that the Internet story is merely a stunt to draw attention to the group.

Whether the report is accurate or merely a crude hoax, there is a very real agenda to restrict, regulate and suffocate the free use of the Internet and we have been documenting its progression for years.

The first steps in a move to charge for every e mail sent have already been taken. Under the pretext of eliminating spam, Bill Gates and other industry chieftains have proposed Internet users buy credit stamps which denote how many e mails they will be able to send. This of course is the death knell for political newsletters and mailing lists.

The New York Times reported that "America Online and Yahoo, two of the world's largest providers of e-mail accounts, are about to start using a system that gives preferential treatment to messages from companies that pay from 1/4 of a cent to a penny each to have them delivered. The senders must promise to contact only people who have agreed to receive their messages, or risk being blocked entirely."

The first wave will simply attempt to price people out of using the conventional Internet and force people over to Internet 2, a state regulated hub where permission will need to be obtained directly from an FCC or government bureau to set up a website.

The original Internet will then be turned into a mass surveillance database and marketing tool. The Nation magazine reported in 2006 that, “Verizon, Comcast, Bell South and other communications giants are developing strategies that would track and store information on our every move in cyberspace in a vast data-collection and marketing system, the scope of which could rival the National Security Agency. According to white papers now being circulated in the cable, telephone and telecommunications industries, those with the deepest pockets—corporations, special-interest groups and major advertisers—would get preferred treatment. Content from these providers would have first priority on our computer and television screens, while information seen as undesirable, such as peer-to-peer communications, could be relegated to a slow lane or simply shut out.”

Over the past few years, a chorus of propaganda intended to demonize the Internet and further lead it down a path of strict control has spewed forth from numerous establishment organs:

- * *The U.S. Government wants to force bloggers and online grassroots activists to register and regularly report their activities to Congress. Criminal charges including a possible jail term of up to one year could be the punishment for non-compliance.*
- * Time magazine reported last year that researchers funded by the federal government want to shut down the internet and start over, citing the fact that at the moment there are loopholes in the system whereby users cannot be tracked and traced all the time. The projects echo moves we have previously reported on to clamp down on internet neutrality and even to designate a new form of the internet known as *Internet 2*.
- * In a display of bi-partisanship, there have recently been calls for all out mandatory ISP snooping on all US citizens by both Democrats and Republicans alike.
- * The White House’s own recently de-classified strategy for “winning the war on terror” targets Internet conspiracy theories as a recruiting ground for terrorists and threatens to “diminish” their influence.
- * The Pentagon recently announced its effort to infiltrate the Internet and propagandize for the war on terror.
- * In a speech last October, Homeland Security director Michael Chertoff identified the web as a “terror training camp,” through which “disaffected people living in the United States” are developing “radical ideologies and potentially violent skills.” His solution is “intelligence fusion centers,” staffed by Homeland Security personnel which will go into operation next year.
- * A landmark legal case on behalf of the Recording Industry Association of America and other global trade organizations seeks to criminalize all Internet file sharing of any kind as copyright infringement, effectively shutting down the world wide web – and their argument is supported by the U.S. government.
- * A landmark legal ruling in Sydney goes further than ever before in setting the trap door for the destruction of the Internet as we know it and the end of alternative news websites and blogs by creating the precedent that simply linking to other websites is breach of copyright and piracy.
- * The European Union, led by former Stalinist and potential future British Prime Minister John Reid, has also vowed to shut down “terrorists” who use the Internet to spread propaganda.
- * The EU data retention bill, passed last year after much controversy and with implementation tabled for late 2007, obliges telephone operators and internet service providers to store information on who called who and who emailed who for at least six months. Under this law, investigators in any EU country, and most bizarrely even in the US, can access EU citizens’ data on phone calls, SMS messages, emails and instant messaging services.

- * The EU also recently proposed legislation that would prevent users from uploading any form of video without a license.
- * The US government is also funding research into social networking sites and how to gather and store personal data published on them, according to the New Scientist magazine. “At the same time, US lawmakers are attempting to force the social networking sites themselves to control the amount and kind of information that people, particularly children, can put on the sites.”

The development of a new form of internet with new regulations is also designed to create an online caste system whereby the old internet hubs would be allowed to break down and die, forcing people to use the new taxable, censored and regulated world wide web.

Make no mistake, the internet, one of the greatest outposts of free speech ever created is under constant attack by powerful people who cannot operate within a society where information flows freely and unhindered. Both American and European moves mimic stories we hear every week out of state controlled Communist China, where the internet is strictly regulated and virtually exists as its own entity away from the rest of the web.

The Internet is freedom’s best friend and the bane of control freaks. Its eradication is one of the short term goals of those that seek to centralize power and subjugate their populations under tyranny by eliminating the right to protest and educate others by the forum of the free world wide web.

So 2012 might bring us a virtual doomsday after all.
