

The pyramids and the starry constellations have always been a mystery to mankind. Many questions about the why and how have been answered with new questions and mysteries. Usually attempts from rather conventional points of view and ways of scientific reasoning. But what is science if it would hardly allow never before applied thinking? In no way I claim to be the expert, but I have never underestimated intuitive reasoning, neither did I ever underestimate the value of metaphysics, as much as the yearning to lay bare the unknown.

It has become evident that many pyramids are geographically positioned in a way that they form the same patterns as stellar constellations as these were at a certain point on the time track. A well known pattern is the Orion constellation that matches the pyramid pattern in Egypt. Another pattern is the Ursa Major that matches one of the pyramid patterns in China. Quite a few stellar constellations represent astrological and mythological symbols. It does not necessarily mean that the stars of a constellation are actually on the same scale of distances and on a common two dimensional plane as the points that make up a drawing. On the contrary. But the way that, in ancient times, people looked up in the night sky was somewhat two-dimensional. Chinese stellar constellations, however, are often different from Western constellations, although they share some of the same stars, as only stars up to a certain magnitude could be seen with the naked eye. The fact that pyramid patterns do match some major constellations indicates that Humans have been involved in the geographical placement of the pyramids. Of course the question is to what extent the Aliens have been involved in constructing the pyramids. Aliens would have quite a different imagination, as far as astrological and mythological figures is concerned. But the technology needed to build those pyramids would suggest to be of Alien origin, or at least of an origin not yet understood by the presently known world of science. When I visited the great pyramid of Gizeh (near Cairo) in Egypt, I was told that this pyramid consists of millions of stones, each having an average weight of tens of thousands of pounds. According to the local guides, the pyramid has been built in 20 years, each year only 100 work-days. Well, not hard to calculate that therefore each day thousands of such stones should have been designed, manufactured, transported and placed. By humans... This question I will leave open, because at this point in time I do not have anything tangible about it. Rather than asking the question *how* the pyramids have been built, I find it equally interesting to ask the question *why* they have been built and *what* is the effect that the pyramids cause. Now that is what this article is about. Read on, and enter a way of reasoning that is more than just a theory. It is based on ancient, present and future science. Not necessarily the kind of science we are accustomed to at the universities. Area-51 is an excellent example of a collection of sciences that are inaccessible by the public. And there are more sciences that are inaccessible by the public. But a science that is not easy to get at, is not necessarily untrue.

Let me first explain some basics about what is a dynamo, sometimes called an alternator. A dynamo is a device that you find in almost all cars and on bikes. It is basically a coil that rotates in a cylinder with magnets, and as a result of the rotation a certain amount of electricity is generated. Rotating magnets in a cylinder with coils produces the same effect. Parts of the coil move to the same position as the magnets, over and over again, for as long as the coil rotates. Functionally, it is, in essence, the opposite of an electro motor that needs electricity in order to produce rotation. Technically, they are quite similar. A dynamo can be put to rotation by pushing electricity through it. Try it with the dynamo of your bike, by connecting the wires to a car battery. Well, enough details. Planet Earth (and, of course, other planets) rotates. What causes the rotation is here not the issue. But what is here the issue is the *effect* of the rotation. Our planet and the starry constellations around it, form a dynamo. Parts of planet Earth come into the same position relative to certain starry constellations, over and over again for as long as this planet rotates. This drawing is a *conceptual* representation of this rotational positioning.

Certain pyramids are placed on this planet in a way that their locations form patterns that is the same as patterns (constellations) formed by stars as they were positioned in the past. In other words, the pyramids patterns and the starry constellations are congruent. 'Congruent' or 'congruence' is a mathematical expression that means : having the same shape, but different size. In a dynamo, the surface shapes of the coil and magnets are also similar, as to keep a constant proximity relative to each other, each time they pass each other. Sure it is a bit different from planet Earth relative to the stars, but the concept is the same. The point that I want to make here is the cyclic passing of related elements. The pyramid patterns on Earth come into the same position relative to the starry constellations with congruent patterns, over and over again for as long as this planet rotates. This causes the dynamo effect. The effect is not the production of electricity, though, but it is the production of a certain energy. This energy is not energy that can make a lamp burn or so. It is an energy of a different type. It is rather a force. Today, the ancient Chinese science of Feng Shui is still applied. Basically, this science teaches us the meaning of objects and their relative position, for example in a house. Changing an object's position, such as having the desk in another corner that faces South instead of East, invariably causes a change in one or more life departments of the person who lives in that house and who sits behind that desk. That person not only feels different, but also acts different, and so forth. In fact, the geographical locations of the objects, and their relative positions, and their meaning, these all cause a certain effect. And that is not only true for a house, but also for larger areas, such as cities, countries, continents. Pyramids have been placed on Earth with similar principles in mind. Specific locations. Specific patterns. Specific shapes. It is safe to conclude that a kind of Feng Shui like science has been the reasoning behind the location of those pyramids. Apart from the fact that underneath the major pyramids there are underground temples, caverns with treasures of precious materials, information and technology, which will not be covered in this article (perhaps later on in a separate article), there is more. As you know, for example in astrology each birth sign (starry constellation) has a specific meaning. Whether or not this meaning is generated by the physical stars or by Humans is not really the issue. The meaning is there, and 'it works'. The fact that we do not know, or have forgotten, the meaning of the pyramid patterns, does not exclude that 'it works'. Yes, 'it works', which means that the pyramids cause a certain effect on mankind. (in this article I exclude other life than Humans, just to keep it simple). Let's have a look at the following analogies :

1. In a dynamo, the coil and the magnets can be compared with a program.
2. The rotation can be compared with the running of the program.
3. The dynamo output can be compared with the output of the program.
4. The output of the dynamo (which happens in that case to be electricity) can become input for an apparatus (such as a coffee machine), which can be compared with the application of the

program, i.e. what you do with it.

5. The output of the apparatus can be compared with the result of the application.

Now, let's make a similar analogy with the pyramids :

1. The dynamo, consisting of planet Earth and the stars, can be compared with a program.
2. The rotation of planet Earth relative to the stars can be compared with the running of the program.
3. The Earth/stars dynamo output can be compared with the output of the program.
4. The output of the Earth/stars dynamo (which happens in this case to be a force) can become input for a civilization (such as people, and so forth), which can be compared with the application of the program, i.e. what is done with the force.
5. The output of the civilization, i.e. what the civilization does or produces, can be compared with the result of the application.

In other words, the civilization is subject to the effect that is caused by the cyclic movement of pyramids relative to the stars. And it all has been masterminded, designed and planned. Fragments of this science are still being applied nowadays. Think of specific buildings, such as cathedrals, monuments, statues, and so forth, that have been put at specific locations and at specific positions relative to the North (or South, East, West), for example l'Arc de Triomphe and the Louvre Pyramid in Paris, France. There is always a thought, an intention behind it. And so there is a thought, an intention behind the pyramids. But then with the full applicable science as a basis, fully known by the architects at that time in the past. The intention behind the pyramids is to cause an effect on mankind. An effect much greater than the effect of today's buildings. And it is not by coincidence that pyramids positions match stellar constellations.

Let's go back now to the analogies, and take it a step further.

1. The program is a set of instructions. It is intended to parametrize human life. The programming code consists of the configuration of the pyramids relative to the constellations.
2. The instructions are executed. The life data are generated. The running of the program consists of the movement of the pyramids relative to the constellations.
3. The life data are ready and stored. The data consists of spiritual forces.
4. The life data gets absorbed by mankind. Absorption of life data causes mankind to evolve and behave according to the content of the data. The absorbed data consists of thought patterns.
5. The evolution and activities of mankind, triggered and decided by thought patterns, results into what we know as the living world around us.

In other words, mankind has become what was laid out through pyramid configurations. So, if we would remove or add certain pyramids, some overall human life parameters will change. Thus causing change in thinking and acting. Remember, with Feng Shui it is the same. Remove, displace or add a few objects in your house, and some thinking and acting will change. Acupuncture and acupressure are scientific techniques to cause change in life parameters as well. And so the pyramids also have such function. And repetitive or cyclic exposure to ultra low frequencies, such as applied by mind control activities by the Government, does have a definite effect on us. The repetitive or cyclic positioning of the pyramids relative to the constellations also has a definite effect on us. Other planets also have pyramids. And on those planets there were or are or will be intelligent civilizations. Pyramids nearly all have a square base and triangular sides, whether smooth or staircase surface. Any force or energy that comes from above gets bounced against the pyramid sides and thus spread or redistributed across the horizontal plane (or a certain angle). With the rotation of this planet, the horizontal force fields

therefore get in touch with a large Terran surface area that passes underneath the related constellation(s).

How pyramids are made, when and by whom, I do have theories, but merely based on speculation only. It is a subject I do not go into at this point in time. Perhaps later. It has become evident, however, that there are relationships between the physical characteristics of pyramids and space & time. For example, a pyramid entrance points to a specific area in space, the pyramid's height indicates the distance to a point (star) in space, and the volume of a pyramid represents a time period (usually related with the Earth's rotation). Last but not least, underneath major pyramid sites there are huge underground temples that contain very detailed information about intelligent civilization including their scientific and spiritual (in their time these two were one) knowledge. To date, none of these temples have been exposed to the public. For example, underneath the Gizeh pyramids, many thousands of Alien records have been found (and transferred to New Mexico). Even cabling systems and hi-tech devices have been found that are still a mystery as far as their function is concerned. The pyramids in China are still forbidden territory, even to archeologists.

Pyramids not by Terrans

This pyramid consists of about 2-million stones and was built in 20 years at 100 days a year according to Egyptian guides, after 10 years of preparing the logistics. But, 2-million divided by 20 years divided by 100 days, makes 1000 stones of each tens of tonnes each day. To design, cut, transport, and put each day 1000 huge stones within almost zero tolerance of precision at the right spot, requires rather special technology. In every continent there are pyramids. And there are pyramids on Mars and other planets too. Aliens are the architects, with the appropriate engineering and construction tools & technology, so the pyramids have not been built by Egyptians, neither by other Terrans. Please note that this pyramid was once entirely covered with a perfect flat layer of green granite. The granite layer was taken off later on by greedy Terrans for building their premises. The original pyramid, like many others on this planet, was a perfect mathematical masterpiece. In September, 2002, a tiny robot's electronic eye peered behind a stone door deep inside Egypt's largest pyramid to find another stone obstacle, which disappointed but intrigued watching archaeologists. The robot, the size and shape of a child's toy train, crawled 200 feet up an 8-inch-square shaft emanating from the so-called unfinished Queen's Chamber in the pyramid of Cheops and inserted a fiber-optic camera through a narrow hole it had drilled in a "stone door" at the end. On the other side was a tiny room, empty and with no doorway leading out. So they have found another sealed chamber. An Egyptian antiquities official said that door appeared to have metal handles. He did not say anything about the Alien artefacts found years ago, such as data disks and conduit cables.

Alien data from Egypt to New Mexico

An expedition in the 1920-1930 found a secret chamber under the pyramid in Giza in Egypt. They found metal doors 500 feet below the base of the pyramid. The doors used a sonic code. They found a room with over 30,000 recording disks and Alien equipment, and made photos of the disks with IR film. The Egyptian government would not allow them to take any out. The disks were deciphered. They described the rise and fall of civilizations in outer space going back more than 100,000 years. In fact, first this record room was built, and then later the pyramid got built over it. There was no UFO in the pyramid, but a lot of equipment was stored on three levels. They photographed over 2,700 record disks. According to an Air Force contact, these disks are still kept stored in a safe at Kirtland AFB in New Mexico. They do not want the public to know the information. Several years ago, strange underground conduit cables and metal doors were found in the underground pyramid areas. It never reached the news. When I was visiting the sites in Egypt, I was not allowed to enter the place near the military base. By the way, I am sure that at the Arctic and Antarctic regions there are pyramids as well. One of them is totally polished black. You will see, it is only a matter of time, and there too are numerous Alien artefacts.

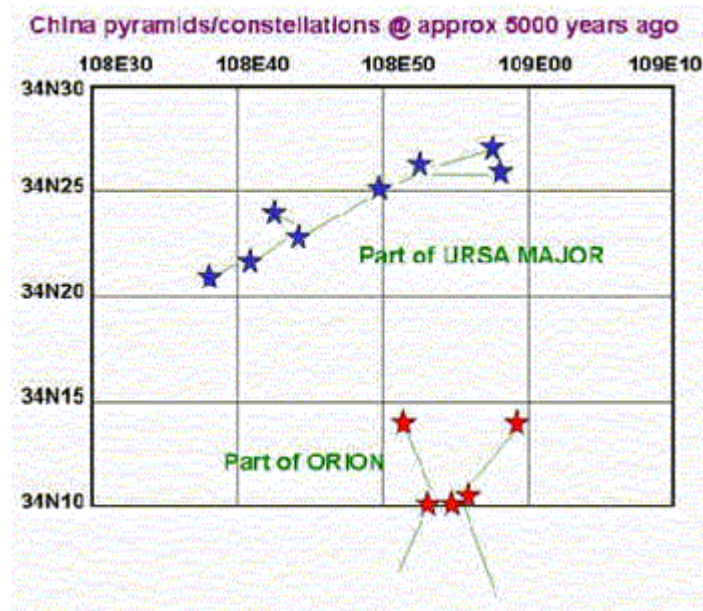

Pyramid patternss

The pyramids in China, there are perhaps a hundred of them, largely kept away from the public, do have their geographical positions matching some constellations. I could obtain the coordinates of only 13 pyramids, plotted their positions in a grid with Northern latitude axis and Eastern longitude axis.

Using The Sky software, I moved the constellations about 5000 years back in time. By overlaying the grid (with the pyramid locations) I found out that there are strong matching patterns. URSA MAJOR and ORION were most close to the patterns. I still need to figure out the exact year of projection. Perhaps I am a few millennia off...

The 3 most well-known Giza pyramids, of the almost 100 in Egypt, represent the three stars in the middle of the ORION constellation. Pyramids are placed in very specific locations, by Aliens. Their purpose is described elsewhere in this web-site. It is quite certain that underneath the major pyramids there are vast underground caverns that contain very convincing traces of Alien science and civilization.

Nowadays located in northern Sudan, the ancient kingdom of Nubia had an incredible 180 pyramids. Admittedly, some were only a few metres in height, however a few attained a height of 40 metres or more. Built much later than their Egyptian counterparts, they were created in the last millennium BC through until about 350 AD, and situated along the banks of the Nile.
